SiSTELLAR maxi LED refurbishment kit

Don't dispose. Refurbish.
Top quality is always in vogue.

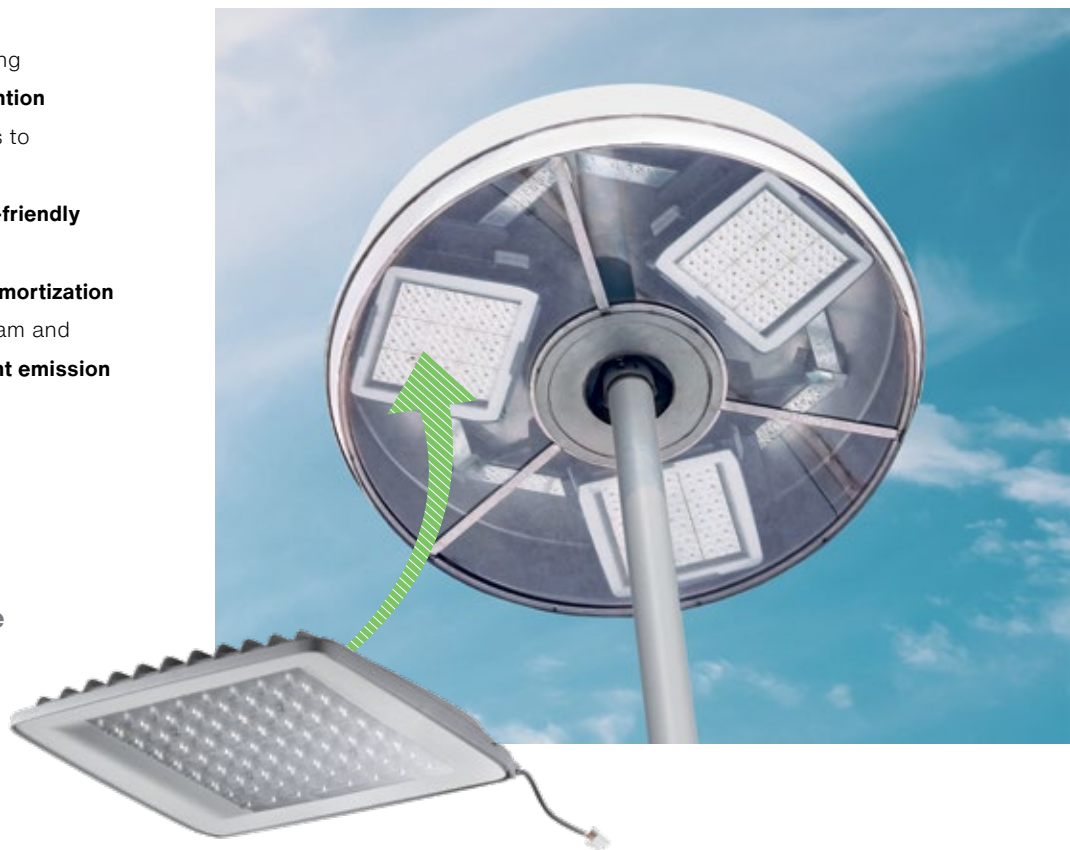

Why dispose of lighting when you can **refurbish** it?

One of the first premium luminaires from SITECO, the SiSTELLAR can still be found decades later along many railroad tracks and on parking lots. High quality simply pays off. And that carries on. Because our new refurbishment kit lets us preserve most of the luminaire while bringing the interior up to current efficiency standards.

Win-win for you and the environment.

- Straightforward refurbishment of existing luminaires with **maximum material retention**
- **Long life** of up to 100,000 hours thanks to optimized thermal management
- Also available in the particularly **insect-friendly light color** of 3,000 Kelvin
- Highly economical solution with **rapid amortization**
- Excellent visibility thanks to narrow-beam and homogeneous illumination with **0% light emission**

90 %
of the old luminaire
is retained.
